Amendments to the Claims

Kindly amend claims 1, 10 and 20, as set forth below. The changes in the amended claims are shown by strikethrough (for deleted matter) and underlining (for added matter).

1.   (Currently Amended) A method of facilitating allocation of resources in a heterogeneous computing environment, said method comprising:

    obtaining, by a resource manager executing on a processor of the heterogeneous computing environment, one or more attributes relating to a node coupled to the resource manager, wherein said node is of the heterogeneous computing environment and is of a native architecture, and wherein the one or more attributes specify one or more non-native architectures supported by the node, said one or more non-native architectures being different than said native architecture;

    determining by the resource manager using the obtained one or more attributes that specify one or more non-native architectures supported by the node whether the node supports an architecture capable of executing a specific request, wherein the specific request specifies the architecture for the specific request that is different from the native architecture of the node; and

    allocating one or more resources of the node to the specific request, in response to the determining indicating the node supports the architecture of the request.

2-4.   (Canceled)

5.   (Previously Presented) The method of claim 1, wherein the specific request comprises a program to be executed.

6.   (Previously Presented) The method of claim 1, wherein the obtaining comprises providing by the node the one or more attributes to the resource manager.

7.   (Previously Presented) The method of claim 6, wherein the providing of the one or more attributes by the node to the resource manager is via one or more other resource managers coupled to the node.

8.   (Original) The method of claim 7, wherein the resource manager is a grid resource manager, and the one or more other resource managers comprise one or more cluster resource managers.

9.   (Original) The method of claim 1, wherein the heterogeneous computing environment comprises a grid computing environment and said resource manager comprises a grid resource manager.

10.   (Currently Amended) A computer system for facilitating allocation of resources in a heterogeneous computing environment, the computer system comprising:

    a memory; and

    a processor in communications with the memory, wherein the computer system is capable of performing a method, said method comprising:

        obtaining, by a resource manager of the heterogeneous computing environment, one or more attributes relating to a node coupled to the resource manager, wherein said node is of the heterogeneous computing environment and is of a native architecture, and wherein the one or more attributes specify one or more non-native architectures supported by the node, said one or more non-native architectures being different than said native architecture;

        determining by the resource manager using the obtained one or more attributes that specify one or more non-native architectures supported by the node whether the node supports an architecture capable of executing a specific request, wherein the specific request specifies the architecture for the specific request that is different from the native architecture of the node; and

allocating one or more resources of the node to the specific request, in response to the determining indicating the node supports the architecture of the request.

11-13. (Canceled)

14.   (Previously Presented) The computer system of claim 10, wherein the specific request comprises a program to be executed.

15.   (Previously Presented) The computer system of claim 10, wherein the obtaining comprises providing by the node the one or more attributes to the resource manager.

16.   (Previously Presented) The computer system of claim 15, wherein the providing of the one or more attributes by the node to the resource manager is via one or more other resource managers coupled to the node.

17.   (Previously Presented) The computer system of claim 16, wherein the resource manager is a grid resource manager, and the one or more other resource managers comprise one or more cluster resource managers.

18.   (Previously Presented) The computer system of claim 10, wherein the heterogeneous computing environment comprises a grid computing environment and said resource manager comprises a grid resource manager.

19.   (Canceled)

20.   (Currently Amended) A computer program product for facilitating allocation of resources in a heterogeneous computing environment, the computer program product comprising:

a storage medium readable by a processor and storing instructions for execution by the processor for performing a method comprising:

obtaining, by a resource manager of the heterogeneous computing environment, one or more attributes relating to a node coupled to the resource manager, wherein said node is of the heterogeneous computing environment and is of a native architecture, and wherein the one or more attributes specify one or more non-native architectures supported by the node, said one or more non-native architectures being different than said native architecture;

determining by the resource manager using the obtained one or more attributes that specify one or more non-native architectures supported by the node whether the node supports an architecture capable of executing a specific request, wherein the specific request specifies the architecture for the specific request that is different from the native architecture of the node; and

allocating one or more resources of the node to the specific request, in response to the determining indicating the node supports the architecture of the request.

21-23. (Canceled)

24. (Previously Presented) The computer program product of claim 20, wherein the specific request comprises a program to be executed.

25. (Previously Presented) The computer program product of claim 20, wherein the obtaining comprises providing by the node the one or more attributes to the resource manager.

26. (Previously Presented) The computer program product of claim 25, wherein the providing of the one or more attributes by the node to the resource manager is via one or more other resource managers coupled to the node.

27. (Previously Presented) The computer program product of claim 26, wherein the resource manager is a grid resource manager, and the one or more other resource managers comprise one or more cluster resource managers.

28. (Previously Presented) The computer program product of claim 20, wherein the heterogeneous computing environment comprises a grid computing environment and said resource manager comprises a grid resource manager.
